

ABLAZE

CONCENTRATED METHYLATED SEED OIL

Highest quality and most concentrated MSO on the market.

HOW IT WORKS

Our MSO products heats up your herbicide or pesticide to make it more potent. The process has a solvency effect on plants, opening them up to absorb the chemicals more effectively. In addition, it slows down the evaporation of water, making the treatment more available for the plants to absorb.

ADVANTAGES

The proprietary blend of surfactants makes the product particularly effective in forming stable oil-and-water emulsions to keep your water-based pesticides and herbicides effectively mixed for even application. The blend contains a variety of plant oil-based and water-soluble active ingredients for a spray pattern that significantly improves spray drift control in surface and aerial applications.

APPLICATION

Recommended rate is 1-8 quarts per 100 gallons of water. For certain in crop applications, lower rates may be needed. See product label for complete usage rates.

- The highest concentrated MSO available on the market
- Contains industry leading surfactant technology
- “Heats up” your herbicide making it more potent
- Has a solvency effect on plants, opening them up to absorb chemical better
