

REDSTAR **BREAKDOWN**

BREAKDOWN was designed to "break down" corn stalk residue after harvest to help release valuable nutrients back to the soil. Cooler fall temperatures limit the natural breakdown of residue and nutrients back to the soil. BREAKDOWN is formulated UAN, ATS and 3 natural carbon sources designed to increase microbial activity in cooler soil conditions to enhance the breakdown release of these valuable nutrients back to the soil. Plus, BREAKDOWN maximizes nitrogen utilization, assimilation in the plants, and reduces the loss of nitrate during the nitrification process in your soils.

BENEFITS

- Designed specifically to decompose crop residue, which can cause nutrient tie up or affect planting stand quality.
- Stimulates biological activity to improve soil health and release of all nutrients back to your crop.
- Provides 3 different carbon sources to help stimulate biological activity and breakdown complex crop residues.
- Works to help nutrient utilization to your new growing crop to maximize nutrient availability and uptake.

APPLICATION

- Rate: 1 gallon / Acre + 1-5 gallons UAN or ATS
- Target Market: Crop Residue (Corn/Corn or No-Till)
